

Quality, Environment, Sustainability and Safety Policy

Engineering services have evolved over the past decades in the context of increasing technical, regulatory, organisational and communication complexity as a result of client demand, environmental and territorial health and safety constraints and the needs expressed by the communities involved.

Lombardi Group's development, in the engineering markets, is based on consolidated and long-lasting collaboration with clients and it is increasingly focused on the search for innovative and sustainable solutions to meet the needs of the environment and the various project stakeholders.

Within this framework, Lombardi Group is committed to the continuous improvement of its performance through:

- the growth of business in the historical market segments in which the Group operates and the expansion of specialist services through the search for innovative solutions, constant comparison, professional updating, integration of multidisciplinary skills, attention to quality, environment, sustainability and health and safety in the workplace;
- the promotion of activities to raise awareness, involvement and training of personnel in relation to health and safety, environmental, quality and sustainability issues, in order to make them adequately competent, aware and responsible in carrying out their duties with respect to the environment, sustainability and safety procedures;
- the management of activities in compliance with the applicable regulatory principles, such as laws, codes in force in the countries in which the Group operates, and in compliance with other subscribed requirements;
- the guarantee to customers, public and private, to provide quality services through qualified and experienced personnel, on time, within agreed costs and in compliance with regulatory, technical, economic and environmental requirements;
- the commitment to maintain business independence through a sound financial basis and strict management control;
- the valorisation of employees through progressive involvement in the technical management of assignments and administrative management of the company;
- taking all necessary measures to prevent and contain pollution, maximising the recovery and recycling of waste and materials, optimising the use of natural resources and proposing sustainable solutions;

the elimination and/or reduction of dangers linked to the possibility of accidents occurring in compliance with current regulations ;

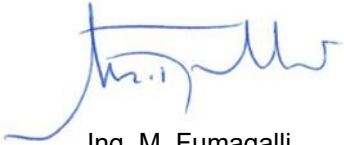

- the commitment to addressing climate change challenges through the development of sustainable engineering solutions that reduce environmental impact, promote energy efficiency and reduce emissions.

Faithful to its commitment to the satisfaction of its stakeholders, Lombardi Group will therefore continue to develop engineering solutions to global challenges, based on the best application of knowledge and technologies while respecting the environment and the health and safety requirements of each context in which it operates.
